Simply Unique Single Seat

Unique SSV Manually Operated/Manually Regulating

General Information
The new generation that meets the highest demands of your process in terms of hygiene and safety. Unique Single Seat Valves are built on a well-proven, platform from an installed base of more than one million valves.

Application
The sanitary and modular design of the manual operated Unique Single Seat Valve can be used in a wide range of applications, e.g. as a Shut-off valve with two (2) or three (3) ports or as a Change-over valve with three (3) to five (5) ports.
The manual regulated Unique Single Seat Valve is a regulating valve used for manual control of pressure and flow.

Working principle
The valves permit gradual opening and the few and simple moving parts result in very reliable valves easy to dismantle. The plug can be fixed in the adjusted position with a lock screw. The valve is based on the modular platform of the Unique Single Seat Valve.

Standard Design
The manual operated valve can easily be converted to a pneumatic operated valve by replacing the crank mechanism with an Unique Single Seat Valve actuator. The other parts are identical.

The Unique Single Seat Manual Valve range cover the sizes from DN50 to DN100 and DN/OD 51 mm to 101.6 mm.

Other valves in the same basic design
The Unique SSV valve range includes several purpose built valves. Below listed are some of the valve models available, though please use the Alfa Laval computer aided selection tool (CAS) for full access to all models and options.

- Standard valve.
- Reverse acting valve.
- Aseptic valve.
- Long Stroke valve.
- Tank Outlet valve.

Unique Single Seat Valve - Manually Operated and Manually Regulating Valves is designed, tested and approved according to EHEDG guidelines.

Manually Regulating Valve

Kv-Factors

Valve size	Kv
38mm/DN40	14*/44
51mm/DN50	75
63.5mm/DN65	113
76.1mm/DN80	171
101.6mm/DN100	250

* optional

Kv = m^3/h at a pressure drop of 1 bar.

For other pressure drops than 1 bar the flow can be calculated with the following formula:

$Q = Kv \times \sqrt{\Delta p}$

Where
Q = Flow in m^3/h.
Kv = See above.
Δp = Pressure drop in bar over the valve.

Example:

Plug Kv 75

Q to be calculated at Δp = 2 bar:
$Q = 75 \times \sqrt{2} = 106\ m^3/h$
or at 50% stroke:
$Q = 0.5 \times 75 \times \sqrt{2} = 53\ m^3/h$

Pressure drop/capacity diagram:

The plugs have linear characteristics. This means that a certain amount of throttling, by reducing the stroke, results in a proportional reduction of the flow if the pressure drop remains unchanged.

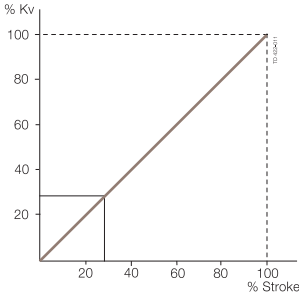

Fig. 3. The flow in % of the total flow at a pressure drop of 1 bar.

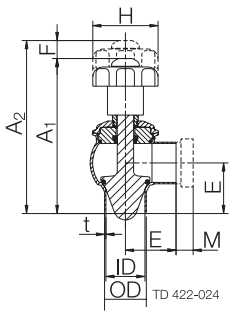

Fig. 4. Dimensions

Materials

Product wetted steel parts:	1.4404 (316L) (internal Ra < 0.8 µm)
Other steel parts	1.4301 (304)
Plug seal:	EPDM
Other product wetted seals	EPDM (standard)

Technical data

Max product pressure:	1000 kPa (10 bar).
Min. product pressure:	Full vacuum.
Temperature range:	-10°C to +140°C (EPDM).

Options

A. Male parts or clamp liners in accordance with required standard.
B. Product wetted seals in HNBR or FPM.
C. Plug seal HNBR, FPM or TR2 plug (floating PTFE design - only for Manual Operated Valve).
D. External surface finish bright.

Ordering

Please state the following when ordering:

- Connections if not welding ends.
- Size.
- Valve body combination.
- Options.

Note

For further details, see instruction ESE00307.
